Office Action Summary

Art Unit: 1712

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 2-16, 20 and 21 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants specification fails to teach that the fatty acids can have a viscosity ranging between 5 and 60 Pa.s at 20 degrees C, unless they are polymerized. Applicants claiming of the nonpolymerized fatty acid having such viscosity thus introduces new matter which is not supported by the specification.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 2-5, 7-16, 20 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kercheville (4280915).

Kercheville teaches a water base drilling fluid which comprises the reaction product of an aminoalcohol, such as diethanolamine, and a fatty acid, which can be a vegetable oil, such as sunflower or linseed oil (column 2, line 35 - column 3, line 12, examples and claims).

Applicants claim 2 teaches that such oils have the specified viscosity required by parent claim 3.

Kercheville further teaches the use of the product in a water based drilling fluid which comprises both lime and sodium hydroxide, which would have a pH above 10 (see column 5, lines 63-68).

5. Claims 6 and 17-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1712

6. Applicants arguments have been considered but are not deemed fully persuasive. The rejection over the SU reference is not maintained, since there is no specific evidence that the cottonseed oil would have the required viscosity. Claim 2 of the present invention teaches that the oils taught by Kercheville have the viscosity required by applicants amended claims. The rejection over Kercheville is thus maintained. A new matter rejection under 35 USC 112 is added in view of applicants amendment.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
